1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BX380176 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA COT 25-NORMALIZED Homo sapiens CDNA CLONE CSODIO44YKO6 3-PRIME, mRNA sequence.

Direct Submission

Submitted (19-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire, Ciallo 1834, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Sep 19, 2000 this sequence version replaced gi:9944073.

During sequence assembly data is comparated from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may note be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSEROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence in contings of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX

IMPORTANT This sequence is not the entire insert of clone RR13-383K5 It may be shorter because we sequence overlapp. The true left end of clone RP13-383K5 is at 1 in this sequence. The true left end of clone RP13-383K5 is at 1 in this sequence. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known ambiguous, there is an annotation using the 'unsure' feature key.

RP13-383K5 is from the library RC1-13.2 constructed by the group of Pieter de Jong, For further details see
                                                                                                                             AL390039

Human DNA sequence from clone RP13-383K5 on chromosome Xq22.1-24
Contains ESTs, STSs and GSSs. Contains a novel gene and a novel
Gene similar to NUP62 (nucleoporin 62kD), complete sequence.
AL390039
                                                                                                                                                                                                                                                                                                                                         Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,
Mammalia, Eutheria, Primates, Catarrhini, Hominidae, Homo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360
                                                                 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
 this
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACCTICACTGCCCACACCATARGCCCCGCAACTGCTATAACTCTGCCACTCTTTGCATG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gorilla gorilla (gorilla)

Gorilla gorilla

Gorilla gorilla

Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Gorilla.

1 (bases 1 to 10230)

Mallet, F., Bouton, O., Prudhomme, S., Cheynet, V., Oriol, G.,

Mallet, F., Ductet, G., Duret, L. and Mandrand, B.

The endogenous retroviral locus ERVWE1 is a bona fide gene involved in hominoid placental physiology

Proc. Natl. Acad. Sci. U.S.A. 101 (6), 1731-1736 (2004)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gorilla gorilla isolate 1 endogenous retrovirus ERV-W, ERVWE1 locus, allele A, complete sequence.
